What is “design thinking”?

Possibly a reaction to misuse of linear, analytical problem solving processes?
(The stuff that gives business people a bad reputation.)

Stanford dSchool Process

Problem Solving

“All life is problem solving.” –Karl Popper

Innovation

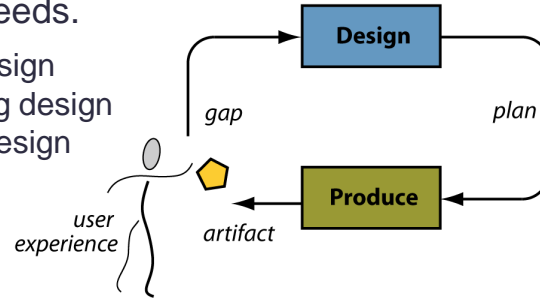

New match solution and need.

Design

Innovation when pulling from needs.

Industrial design Graphic design
Product design Engineering design
Landscape design Furniture design
etc.

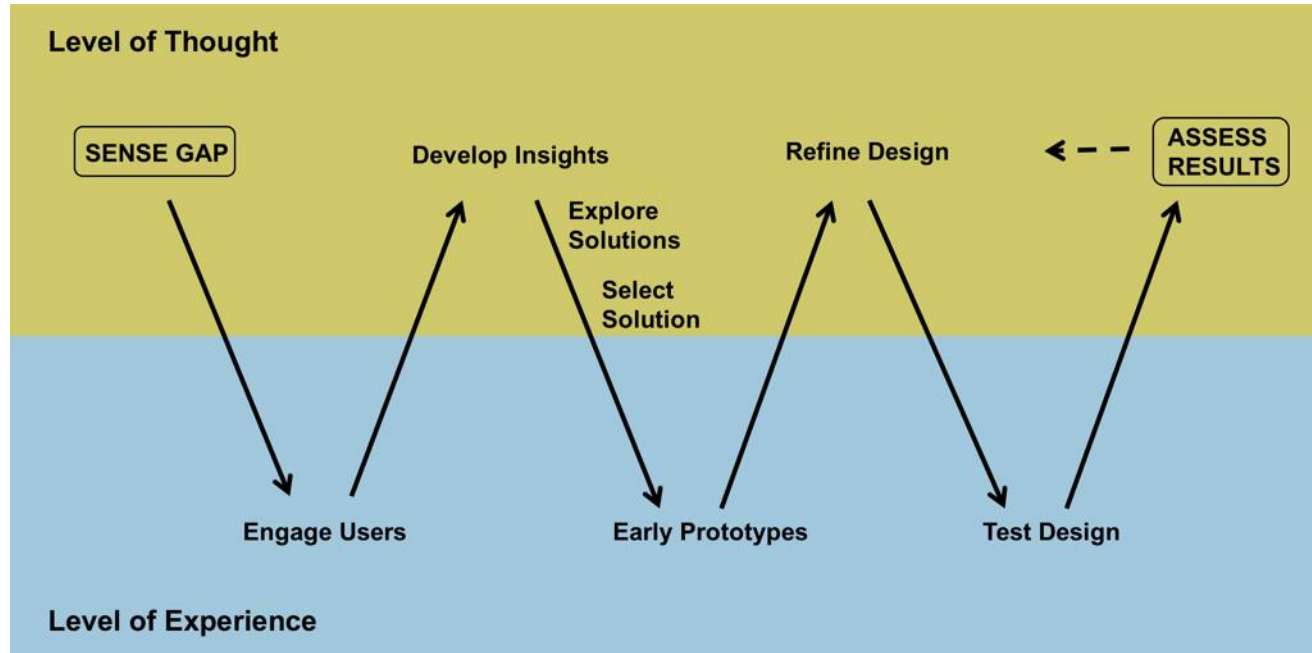

Design Thinking

Design process applied to something other than visible artifacts (e.g., services, processes, business challenges).

Design Process & The W-V Model of Problem Solving

- Emphasizes iterative experiential process.
- Developed and articulated within Total Quality Management movement in 1980s.
- Is “design thinking” just good problem solving process in high-uncertainty environments?

Reference: Shoji Shiba and David Walden, Four Practical Revolutions in Management: Systems for Creating Unique Organizational Capability, 2nd Edition.

Hallmarks of “Design Thinking”

- 5 Whys – abstracting problem deliberately
- User orientation, focus on empathy
- Observational methods
- Early prototypes
- Iterative refinement
- Visual expression

• Culture of “yes”

• Bias for action

Plus beauty, elegance, craft, and care.

Workshop Mission

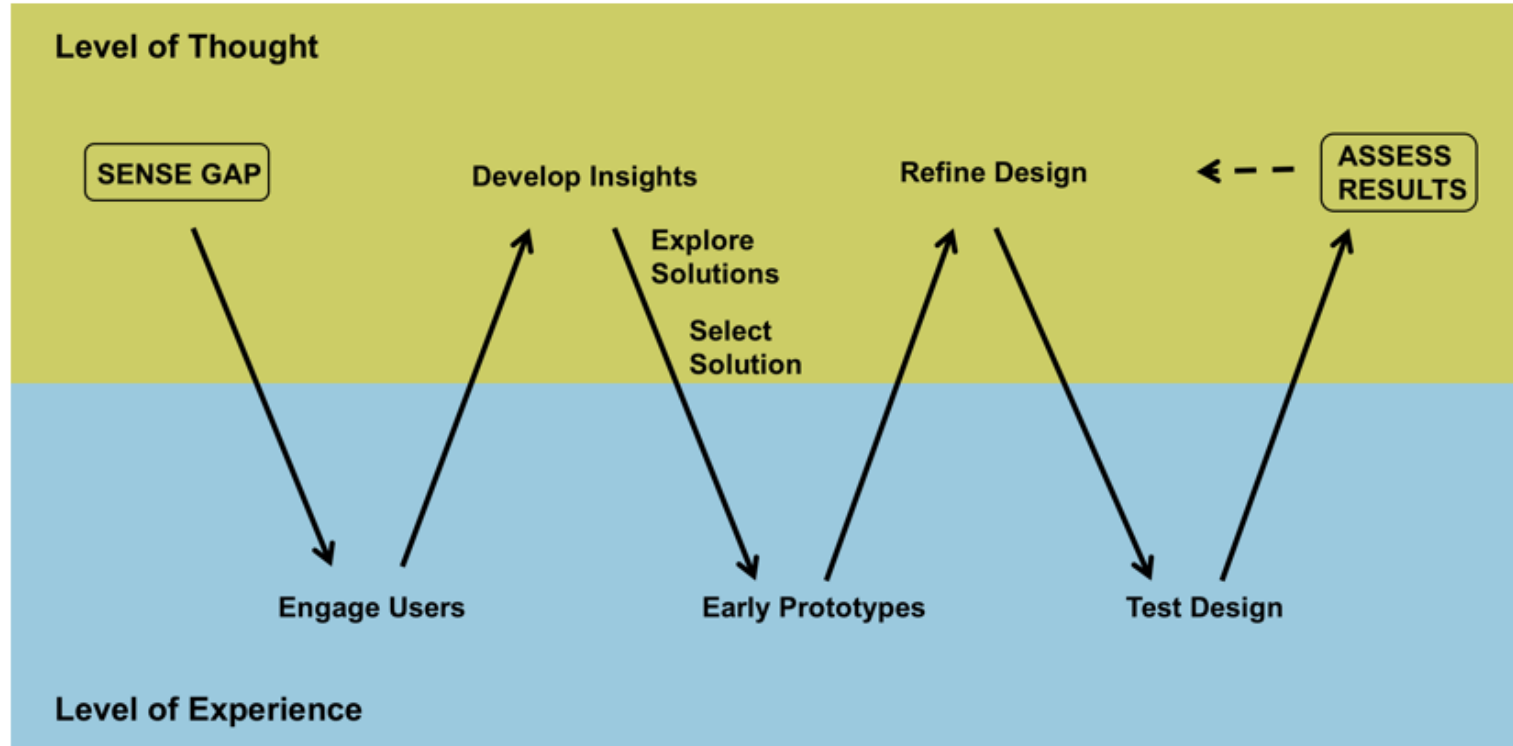

In what way might we...improve the *lunch experience* in campus-like environments?

Beachhead Market: Those studying or working in a semi-public campus environment like a university, office park, or dense urban neighborhood.

Deliverable: As a team of 4, develop and deliver to the market a pitch for your proposed solution, including illustrations and prototype(s) of key elements (with a demo and 60-second pitch).

After presentation of the solutions, the target market will be asked to “try/buy” **three** services via voting.

 DID THIS

Sense Gap

“5 Whys” Applied to Problem Definition

☐ provide for ourselves and our families?

☐ increase our economic value to society?

☐ educate ourselves?

☐ archive information?

☐ store books?

☐ fasten a book shelf to the wall?

☐ make a 6mm hole?

☒ drive a 6mm drill bit at 1000 rpm?

☐ connect an electric motor to a replaceable drill bit?

☐ convert electrical energy to rotational mechanical energy?

Sense Gap - What problem are we really trying to solve?

Five whys technique (aka what-how ladder, abstraction hierarchy)

In what ways might we...

- Improve the health and wellness of working/studying adults?
- Avoid painful feelings of hunger during the day?
- Meet daily nutritional requirements while out of the house?
- ★ • Improve the lunch experience in campus-like environments?
- Procure lunch from local vendors more efficiently?
- Deliver lunch packages reliably to intended recipients?

Insight from Users (4 min + 4 min) x 2

- Observe; “Show me” and “Tell me.”
- List of key unmet needs, *latent* needs.
- Look for user “bandaids” (solutions users create for themselves).
- Look for an “aha” insight about a need.

A good insight is:

1. Authentic (rooted in your observations)
2. Non-obvious
3. Significant (related to a meaningful opportunity to improve experience)

Explore Solutions (8 minutes working individually, goal 3-5 solutions)

Independent parallel exploration.

Consider a *single* latent need (your “aha insight”) – consider solutions that focus on that need.

Solutions from analogous domains.

How would Google do it? How would Apple do it? How would Toyota do it?

Dabbawalla System in Mumbai

~200.000 meals delivered each day by about 5000 Dabbawallas.

Some Solution Strategies

Swiss Army Knife. Do it all for everyone.

Latent Need Pure Play. Identify a latent need – felt but unarticulated – reveal the need and your solution. Don't clutter the solution with more bells and whistles.

Bowling Pin. Identify a niche and totally address the unmet needs.

Mass Market. Identify the needs of the mass market and deliver a great value, highly functional product, nicely implemented.

Wow Concept. Identify a pain point and deliver a surprising and novel concept.

Concept Development (Teams of 4, 10 min)

- Share your solutions with your partners.
- Get some feedback.
- Select one of the concepts for your team to pursue.

Concept Development - Prototype (Teams of 4, 10 minutes)

- Create a *very quick* sketch and/or prototype(s) of your concept(s).

An early prototype of the iPod created by Tony Fadell.

Steven Levy article on origins of iPod. <https://www.wired.com/2006/11/ipod/>

Story Boards as Prototypes (usually for services)

User Feedback (2 x 5+5 minutes)

- Pair up with another team.
- A show B prototype.
- Get feedback.
- Same for B...
- Repeat with a second team.

Will the dogs eat the dog food?

Photo: Maja Dumat - flickr.com, Creative Commons

Final Design and Prototype (15 minutes)

- Refine your concept based on the feedback.
- Build your final prototype to launch in market.
- Deliverables:
 - Name
 - Storyboard proto
 - Ready for 60-second pitch

BIG NAME

Features and Benefits

Hallmarks of “Design Thinking”
